

# NormaVision G

**Automated blood cell image analysis system**

- Digital blood cell morphology for small and medium laboratories
- Automation, standardization and documentation of your work
- Automated scanning and identification of blood cells (WBC, RBC, PLT)
- Pre-classification and validation
- Continuous improvement of professional skills

# Blood cell analysis process

1

Automatic scanning of the microscopic image of a blood smear; collection of data for analysis.

2

Automatic identification and pre-classification of blood cells.

3

Review and validation of the results by a specialist.

4

Integration of the analysis results into the report; consultation.
